Restaurant Sales & Operations Analytics Dashboard

This dashboard analyzes restaurant transaction data to provide insights into revenue performance, profitability, operational demand patterns, and menu engineering. It supports data-driven decisions for pricing, promotions, staffing, and menu optimization.

Project Overview

This dashboard analyzes transactional sales data of YKS Restaurant (Jan 2023 – Mar 2024) to identify revenue opportunities, menu performance, and operational patterns.

The analysis focuses on:

- ***Menu Engineering Analysis***
- ***Profitability Intelligence***
- ***Revenue Leakage Detection***
- ***Operational Insights***
- ***Sales Forecasting***

Goal: Improve profitability and optimize pricing decisions.

Dataset Overview

Source: Restaurant POS Data

Fields include:

- **Invoice No**
- **Item Name**
- **Category**
- **Quantity**
- **Unit Rate**
- **Net Amount**
- **Discount**
- **Staff**
- **Invoice Date**

Menu Performance Classification

Menu items are evaluated using two key metrics:

- **Popularity – how often an item is ordered**
- **Profitability – profit generated from the item**

Based on these metrics, items are grouped into four categories:

- **Star – High popularity & high profit**
- **Plowhorse – High popularity but low profit**
- **Puzzle – High profit but low popularity**
- **Dog – Low popularity & low profit**

Insight:

This classification helps identify which dishes should be promoted, optimized, or replaced to improve restaurant profitability.
